## How to login to nanostation m2

Username Password ubnt ubnt Portions © Wikidevi under CC BY-SA 3.0. Featuring a panel antenna and dual-polarity performance, the NanoStation®M is ideal for Point-to-MultiPoint (PTMP) applications requiring high-performance CPE devices with a sleek form factor. Models: locoM2, locoM5, locoM9, NSM2, NSM3, NSM365, NSM5 If you have a problem with NanoStation M2 or PicoStation m2 or another model on this segment there are 2 ways to do a hard reset to default settings. First way: Connect your device to pc or notebook and enter this IP address: 192.168.1.20 or another one you set before. Enter login and pass (by default ubnt) Choose "SYSTEM" at the menu Press "Reset to Default". Then just wait. The second way We recommend doing it when you forgot your password or can't connect to Nanostation via WEB. To do it please connect it to pc or notebook and turn it on. Then you will need to press "Reset" near the main LAN port and wait 8-15 seconds. When done you will see all indication lamps will blink a few times. On some device the reset button on POE (see pic): Sometimes after resetting user can't connect to Nanostation m2 and if you are one of them so maybe this information will help you: check cable connector (anyway) Set the LAN IP (ipv4) to 192.168.1.21 subnet mask 255.255.255.0 default gateway 192.168.1.20 (where to do it? > connection setting > TCP/IPv4 ) Thanks for your attention. Hope this info will useful for you ☺ [Explainer M2 delivers news and press releases for partners around the world. N/A Top Country NanoStationM2/M3/M365/M5 Zip Tie PoE (24V, 0.5A) with Mounting Bracket Power Cord NanoStationLocoM2/M5 Zip Tie PoE (24V, 0.5A) with Mounting Bracket Power Cord NanoStationLocoM9 Zip Tie PoE (24V, 0.5A) with Mounting Bracket Power Cord Shielded Category 5 (or above) cabling with drain wire should be used for all wired Ethernet connections and should be grounded through the AC ground of the PoE. We recommend that you protect your networks from harmful outdoor environments and destructive ESD events with industrial-grade, shielded Ethernet cable from Ubiquiti. For more details, visit [ui.com/toughcable](#) Surge protection should be used for all outdoor installations. We recommend that you use two Ethernet Surge Protectors, model ETH-SP, one near the NanoStation and the other at the entry point to the building. The ETH-SP will absorb power surges and safely discharge them into the ground. **Hardware Overview Power LED** The LED will light green when the device is connected to a power source. LAN1 LED The LED will light steady green when an active Ethernet connection is made to the Main/LAN port and flash when there is activity. LAN2 LED (NanoStation M2/M3/M5 only) The LED will light steady green when an active Ethernet connection is made to the Secondary port and flash when there is activity. Signal LEDs in airOS®: you can modify the threshold values for the wireless signal strength LEDs on the Advanced tab under Signal LED Thresholds. The default values are shown below. Secondary Port (NanoStationM2/M3/M5 only) This 10/100 Ethernet port is used for bridging and supports software-configurable PoE passthrough. Note: To use PoE passthrough on the Secondary port, a 24V, 1A PoE adapter is required. Main/LAN Port This 10/100 Ethernet port is used to connect the power and should be connected to the LAN and DHCP server. Reset Button To reset to factory defaults, press and hold the Reset button for more than 10 seconds while the device is powered on. Alternatively, the device may be reset remotely via a Reset button located on the bottom of the PoE adapter. locoM9 Power LED The LED will light green when the device is connected to a power source. LAN1 LED The LED will light steady green when an active Ethernet connection is made to the Main/LAN port and flash when there is activity. Signal LEDs in airOS®, you can modify the threshold values for the wireless signal strength LEDs on the Advanced tab under Signal LED Thresholds. The default values are shown below. RP-SMA Antenna Connector Reserved for future use. Main/LAN Port This 10/100 Ethernet port is used to connect the power and should be connected to the LAN and DHCP server. Reset Button To reset to factory defaults, press and hold the Reset button for more than 10 seconds while the device is powered on. Alternatively, the device may be reset remotely via a Reset button located on the bottom of the PoE adapter. Installation WARNING: The switch port must comply with the power specifications listed in this Quick Start Guide. OR Optional Accessing airOS Verify connectivity in the airOS Configuration Interface. Make sure that your host system is connected via Ethernet to the device. Configure the Ethernet adapter on your host system with a static IP address on the 192.168.1.x subnet. Launch your web browser and type in the address field. Press enter (PC) or return (Mac). Enter ubnt in the Username and Password fields. Select your Country and Language. You must agree to the Terms of Use to use the product. Click Login. The airOS Configuration Interface will appear, allowing you to customize your settings as needed. For details, refer to the User Guide available at [ui.com/download/airmax](#) You can also manage your device using the Ubiquiti® Network Management System. Setup using the UNMS™ app requires the U-Installer, sold separately. Installer Compliance Responsibility Devices must be professionally installed and it is the professional installer's responsibility to make sure the device is operated within local country regulatory requirements. The Antenna Gain and Output Power fields are provided to the professional installer to assist in meeting regulatory requirements.
